PROFESSIONAL SUMMARY

Full-stack software engineer who has shipped multi-tenant SaaS and IoT platforms handling real-time data at scale — including a 98% reduction in database writes through batched processing and Redis-cached real-time pipelines. Built DeployDock, a self-hosted CI/CD deployment platform with SSH-based deploys and real-time log streaming.

EXPERIENCE

Software Engineer

Mar 2025 – Present

AAPGS Private Limited

Madurai, Tamilnadu

- Built REST APIs and Angular/React UIs for IoT and SaaS products, owning features end-to-end from MongoDB schema design through frontend integration.
- Cut database load in high-frequency Socket.IO workflows by caching metadata in Redis with NX locks and batching writes via background workers.
- Shipped real-time features (live data updates, notifications, event-driven UI) using Socket.IO across multiple production applications.
- Designed multi-tenant architecture with dynamic per-tenant database switching and JWT-based authentication.

Web Developer

Dec 2024 – Feb 2025

E-Careerpluz Private Limited

Madurai, Tamilnadu

- Built a responsive business website with PHP backend handling contact forms, subscription emails, and notifications.
- Crafted interactive UI using HTML, CSS, and JavaScript for a digital services and legal advisory platform.

PROJECTS

DeployDock | *Next.js, Node.js, TypeScript, MongoDB, SSH, PM2, SSE* | [GitHub](#)

Personal Project

- Built a self-hosted CI/CD platform with SSH-based remote deployments, PM2 process management, and git-based rollback support.
- Designed multi-tenant isolation using per-tenant MongoDB databases and AES-256-CBC encrypted SSH credentials.
- Streamed deploy logs in real time via SSE backed by worker threads, keeping the deployment pipeline non-blocking under concurrent jobs.
- Automated deployments with GitHub OAuth and webhook integration, tracking commit SHAs and full deployment history.
- Built a no-code automation editor with React Flow supporting conditional notification workflows across SMTP, ZepetoMail, Twilio, and Meta WhatsApp API.

ProfluxIoT | *Angular, Node.js, MongoDB, Redis, Socket.IO, ECharts*

AAPGS Private Limited

- Architected a scalable IoT platform with per-tenant database isolation and JWT-based authentication.
- Delivered a configurable dashboard system with drag-and-drop real-time ECharts and table widgets with user-level assignment.
- Reduced database write operations by 98% by batching 50 documents per insertMany in background workers instead of individual inserts.
- Eliminated per-emit MongoDB reads by caching dashboard metadata in Redis with NX locks, reducing query latency on every real-time data push.
- Engineered a visual automation engine using FoblexFlow enabling conditional workflows (HTTP, Email, WhatsApp) per device.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python

Frameworks: React, Next.js, Angular, Node.js, Express.js

Databases: MongoDB, Redis

Tools & Libraries: Socket.IO, Git, PM2

EDUCATION

The Madura College

Bachelor of Science in Information Technology, CGPA: 7.61

Madurai, Tamilnadu

Aug. 2021 – May 2024
